Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I: Claims 6-7, 9-11 drawn to a bearing, classified in Class 384, subclass 490.

Group II: Claims 1-5, 8, drawn to a process of making a bearing and machine for making a bearing, classified in Class 29, subclass 898+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make an other and materially different product or (2) that the product as claimed can be made by another and materially different process (M.P.E.P. § 806.05(f)). In the instant case the process as claimed can be used to make an other and materially different product, for example, a piece of jewelry.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
